## OBJECTIVE

---

Computer Systems Engineering graduate seeking an entry-level role in Data Science, Machine Learning, Python Development, or Data Analytics. Skilled in Python, data analysis, machine learning, and problem-solving, with hands-on experience in real-world projects, data-driven decision-making, and software development.

## EDUCATION

---

|                                                                              |                                  |
|------------------------------------------------------------------------------|----------------------------------|
| <b>BE Computer Systems Engineering</b><br>Sukkur IBA University, Pakistan    | <i>2022 – 2026</i><br>CGPA: 3.68 |
| <b>Intermediate in Pre-Engineering</b><br>City School and College, Pano Aqil | <i>2021 – 2022</i><br>Grade: A1  |

## EXPERIENCE

---

|                                                                      |                            |
|----------------------------------------------------------------------|----------------------------|
| <b>Data Science Intern</b><br><i>10Pearls Shine Program – Remote</i> | <i>Sep 2025 – Nov 2025</i> |
|----------------------------------------------------------------------|----------------------------|

- Developed an end-to-end AQI prediction and monitoring system using OpenWeather API, Hopsworks Feature Store, and Python ML models for 3-day forecasts, with a Streamlit dashboard and automated updates via GitHub Actions.
- Engineered and managed features in Hopsworks, scheduling regular data refresh and model retraining.

|                                                                                       |                            |
|---------------------------------------------------------------------------------------|----------------------------|
| <b>Data Science and Analytics Intern</b><br><i>DevelopersHub Corporation – Remote</i> | <i>Apr 2025 – May 2025</i> |
|---------------------------------------------------------------------------------------|----------------------------|

- Built and deployed IMDB sentiment analysis and credit card fraud detection models using Logistic Regression, Random Forest, SMOTE, and SHAP, packaged with a CLI tool for quick inference.

## PROJECTS

---

**Loan Default Prediction** – Built ML models to predict loan default risk from customer and loan data.

**Diabetes Prediction using Machine Learning** – Predicted diabetes likelihood using logistic regression on medical data.

**Text Summarization Using NLP Techniques** – Implemented extractive text summarization to generate concise document summaries.

**Pitch Detection and Gender Classification Using Audio** – Classified speaker gender from audio using pitch and other extracted features.

**Exploratory Data Analysis and Visualization** – Performed EDA and visualizations to uncover patterns and insights in a real-world dataset.

## CERTIFICATIONS

---

**Python for Data Science (Cognitive Class-IBM, 2025)** – Data analysis using Pandas, NumPy, and Matplotlib.

**Introduction to Python (DataCamp, 2024)** – Python basics, loops, and functions with hands-on coding exercises.

## TECHNICAL SKILLS

---

**Programming:** Python, C++, Java, MATLAB

**Data Science & ML:** NumPy, Pandas, scikit-learn, LightGBM, SHAP, SMOTE, Matplotlib, Seaborn

**NLP & Audio Processing:** TF-IDF, NLTK, Librosa, SpeechRecognition

**Data Engineering & Tools:** SQL, Hopsworks Feature Store, Git, GitHub, Jupyter, VS Code, Streamlit

**MLOps & Automation:** CI/CD (GitHub Actions), Model Deployment, Data Pipelines

**Operating Systems:** Ubuntu, Windows
